

## MODE Racing Double Adjustable Short Shifters Now Available For Many High Performance Models

MODE Racing introduces a series of Double Adjustable Short Shifters for numerous high performance vehicles. MODE Racing has put countless hours of research and development, including true track tested data, into each short shifter.

The MODE Racing Double Adjustable Short Shifter bodies are anodized black and made of 6061 T6 Aluminum, giving it strong rigidity but keeping it lightweight.

The highlight of the MODE Racing Double Adjustable Short Shifter is the ability to adjust both shift knob height and throw by making very few adjustments. The MODE Racing Double Adjustable Short Throw Shifter is user friendly and customizable to each driver's preference and driving style, giving maximum performance with each shift. This allows each driver the precision that he or she needs to excel on the street for spirited driving or on the track.

Last but not least, each MODE Racing Double Adjustable Short Shifter is compatible with the OEM Shift knob. It can also be used with almost any aftermarket shift knob allowing maximum customization and personal preference.

Each kit comes with all the necessary hardware and may re-use some factory pieces.

Applications are available for:
